

COURSE DESCRIPTION

Acquire the skills to make your data protection strategy successful with the *Veritas NetBackup 8.2: Administration* course. You will learn the general principles, configuration, and management of NetBackup, including how to best utilize the NetBackup tools and interfaces, effectively monitor backup operations, and ensure data recovery objectives are met.

Delivery Method(s)

This course is available in the following delivery methods:

- [Instructor-led training \(ILT\)](#)
- [Virtual instructor-led training \(VILT\)](#)
- [Learning Lab](#)

Duration

- Instructor-led training - ILT: 5 days, including 6 months of lab access
- Virtual instructor-led training - VILT: 5 days, including 6 months of lab access
- Learning Lab – Self-paced lesson guide plus 6 months of lab access

Course Objectives

After completing this course, you will be able to:

- Discuss the challenges of performing backups in today's enterprise computing environments.
- Describe the functions of the master server, media servers, and clients.
- Diagram the NetBackup product architecture.
- Define common terms used in the NetBackup product.
- Describe how NetBackup backs up and restores data.
- Identify NetBackup options and agents.
- Use the NetBackup Administration Console, Web Interface, and OpsCenter.
- Configure and manage basic disk storage units and storage unit groups.
- Configure file system backup policies and schedules.
- Perform manual backups and user-directed backups.
- Restore files using the Java or Windows BAR interface and OpsCenter Operational Restore.
- Monitor NetBackup backup and restore jobs and perform basic troubleshooting and information-gathering steps related to failing jobs.
- Configure and manage AdvancedDisk storage units and disk pools.
- Configure tape-based devices and volume pools; perform a robot inventory.
- Manage robot and tape drive settings, including media sharing.
- Monitor and manage media and media states.
- Configure, run, and manage virtual machine backups using VMware.
- Recover virtual machines, including using VMware Instant Recovery.

- Use the integrated NetBackup vSphere Web Client Plug-in for VMware.
- Configure, run, and manage virtual machine backups using Hyper-V.
- Describe the various methods of backup image duplication.
- Configure Storage Lifecycle Policies (SLPs) and initiate jobs that use SLPs.
- Manage the NetBackup catalog to search for, verify, duplicate, import, and expire backup images.
- Back up and recover the NetBackup catalogs.
- Optimize file system backups using incremental backups, True Image Restore, synthetic backups, NetBackup Accelerator, multiple data streams, and multiplexing.
- Identify and use resources for troubleshooting NetBackup, including the support information gathering tools related.

Who Should Attend

This course is intended for technical professionals responsible for the design, configuration, operation, monitoring, or support of NetBackup.

Prerequisites

Students should be familiar with general network and storage concepts, and the administration and configuration of Windows or Linux operating systems.

Hands-On

This course includes practical hands-on lab exercises to apply your new skills in a virtual NetBackup domain. At the start of class students will choose between Windows-based or Linux-based NetBackup servers to perform lab exercises.

COURSE OUTLINE

Introducing NetBackup

- Data protection and the NetBackup environment
- NetBackup concepts
- NetBackup Appliance Overview
- Using the NetBackup Administration Console
- Using the NetBackup web interface
- Using NetBackup OpsCenter
- NetBackup Installation

Labs:

- Exercise A: Introduction to your Lab on Demand (LOD) lab environment
- Exercise B: Installing NetBackup Software
- Exercise C: Exploring the NetBackup Administration Console
- Exercise D: NetBackup Host Properties
- Exercise E: Accessing the NetBackup web interface
- Exercise F: Exploring the NetBackup web interface
- Exercise G: Configuring role-based access control
- Exercise H: Creating and editing a custom rule (Optional)

Configuring NetBackup Storage

- NetBackup storage device concepts
- Configuring and managing a basic disk storage unit
- Configuring storage unit groups

Labs:

- Exercise A: Viewing disk storage on a NetBackup server system
- Exercise B: Configuring a Basic Disk storage unit
- Exercise C: Configuring a storage unit group

Configuring Policies

- Introduction to backup policies
- Creating and configuring policy attributes
- Creating a policy schedule
- Adding client to a policy
- Creating backup selections
- Managing policies

Labs:

- Exercise A: Configuring a NetBackup policy
- Exercise B: Configuring a policy to use calendar-based schedules
- Exercise C: Copying a policy to create a new policy
- Exercise D: (Optional) Lab challenge

Performing File System Backups

- Using and customizing the NetBackup Activity Monitor
- Performing manual backup operations
- Performing user-directed backups
- Backup job-related tips

Labs:

- Exercise A: Using the Activity Monitor
- Exercise B: Performing Manual backups
- Exercise C: Viewing job details
- Exercise D: Deactivating and activating policies
- Exercise E: Performing user-initiated backups

Performing File System Restores

- Introduction to restores
- Performing restore operations using the BAR interface
- Performing restore operations using OpsCenter Operational Restore
- Restore job-related tips

Labs:

- Exercise A: Becoming familiar with the key restore settings in the BAR interface.
- Exercise B: Restoring client files to their original location
- Exercise C: Restoring files to an alternate file system location
- Exercise D: Restoring files to an alternate client system
- Exercise E: (Optional) Using the OpsCenter Operational Restore feature

Configuring Disk Pools

- Understanding disk pools and AdvancedDisk
- Configuring AdvancedDisk
- Managing AdvancedDisk storage

Labs:

- Exercise A: Identifying AdvancedDisk storage

- Exercise B: Configuring AdvancedDisk
- Exercise C: Verifying AdvancedDisk configuration
- Exercise D: Configuring a policy to write backup images to AdvancedDisk storage
- Exercise E: Performing and monitoring backups to AdvancedDisk storage
- Exercise F: Monitoring and managing AdvancedDisk disk pools

Configuring Media Server Deduplication

- Introduction to NetBackup deduplication
- Configuring NetBackup media server deduplication
- Configuring client-side deduplication
- Managing NetBackup deduplication

Labs:

- Exercise A: Configuring NetBackup Media Server Deduplication (MSDP)
- Exercise B: Configuring a policy to use MSDP storage
- Exercise C: Performing backups to MSDP storage
- Exercise D: Configuring and using client-side deduplication
- Exercise E: Monitoring and managing NetBackup MSDP storage
- Exercise F: (Optional) Running Deduplication reports in OpsCenter

Configuring and Managing Tape Storage

- Understanding Media Manager storage units
- Configuring tape devices
- Verifying tape storage
- NetBackup media concepts
- Configuring media
- Managing robots and tape drives
- Monitoring media and media states
- Managing tapes
- Media- and device-related tips

Labs:

- Exercise A: Verifying tape devices are visible to the operating system of media servers
- Exercise B: Configuring tape devices and storage units using the Device Configuration Wizard
- Exercise C: Configuring volume pools
- Exercise D: Configuring volumes using the Robot Inventory user interface provided by NetBackup and, in the process, create barcode rules
- Exercise E: Viewing tape drive and robot configuration settings
- Exercise F: Using the Device Monitor to monitor and manage tape drives
- Exercise G: Managing media
- Exercise H: Running tape-based reports
- Exercise I: (Optional) Using the robtest utility
- Exercise J: (Optional) Running NetBackup reports from the command line
- Exercise K: (Optional) Performing Media state management using the command line

Performing VMware Backups

- Introduction to virtual machine backups
- Configuring VMware backups
- Protecting VMware Assets using the web UI
- Performing and Monitoring VM Backups

Labs:

- Exercise A: Verifying the VMware environment
- Exercise B: Configuring NetBackup servers to access the VMware vCenter server
- Exercise C: Installing the NetBackup Plug-in for VMware vSphere Web Client
- Exercise D: Configuring a VMware policy in NetBackup
- Exercise E: Performing and monitoring NetBackup VMware virtual machine backups
- Exercise F: Excluding disks from a VMware virtual machine backup
- Exercise G: Managing VMware credentials using the web UI
- Exercise H: Managing VMware Assets using the web UI

Performing VMware Restores

- Managing virtual machine restores
- Managing VMware restores
- Using VMware Instant Recovery
- VMware Agentless Restore

Labs:

- Exercise A: Recovering virtual machine files
- Exercise B: Recovering a VMware virtual machine disk
- Exercise C: Recovering an entire VMware virtual machine
- Exercise D: Performing non-NetBackup pre-requisites tasks for IRV
- Exercise E: Performing NetBackup pre-requisite tasks for Instant Recovery for VMware (IRV)
- Exercise F: Performing Instant Recovery for VMware (IRV) using the vSphere Web Client
- Exercise G: Using NetBackup Web UI to recover a virtual machine to alternate location

Protecting and Recovering Hyper-V Virtual Machines

- Introduction to NetBackup for Hyper-V
- Configuring Hyper-V backups
- Performing and Monitoring Hyper-V backups
- Performing Hyper-V restores
- Performing Hyper-V restores with the NetBackup Add-in for SCVMM

Labs:

- Exercise A: Configuring NetBackup communication with Hyper-V
- Exercise B: Configuring a Hyper-V Intelligent Policy and backing up Hyper-V virtual machines
- Exercise C: Restoring individual files
- Exercise D: Restoring the full Hyper-V machine
- Exercise E: Performing Hyper-V backups and restores in an SCVMM environment

Duplicating Backups Using Storage Lifecycle Policies

- Backup duplication concepts

- Storage lifecycle policy concepts
- Using storage lifecycle policies
- Additional Storage Lifecycle Policy features and benefits

Labs:

- Exercise A: Configuring a Storage Lifecycle Policy
- Exercise B: Configuring a NetBackup policy to use a Storage Lifecycle Policy
- Exercise C: Modifying SLP Host Properties
- Exercise D: Viewing and monitoring SLP operations

Managing and Protecting the NetBackup Catalog

- Introduction to NetBackup catalogs
- Managing images
- Configuring a catalog backup policy
- Disaster recovery strategies

Labs:

- Exercise A: Running NetBackup catalog-related reports
- Exercise B: Verifying, expiring, and importing backup images
- Exercise C: Configuring and running NetBackup catalog backups
- Exercise D: Recovering the catalogs using the NetBackup Catalog Recovery wizard

Optimizing File System Backups

- File system backup challenges
- Optimizing file system backups
- Optimizing file system backups with NetBackup Accelerator
- Using multiple data streams
- Optimizing tape drive performance using multiplexing
- Handling busy files on UNIX and Windows file systems

Labs:

- Exercise A: Optimizing backups using the NetBackup Accelerator
- Exercise B: Configuring for and using multiple data streams
- Exercise C: (Optional) Configuring and performing multiplexed backups

Collecting Logs and Diagnostic Information

- Performing basic NetBackup troubleshooting
- Identifying NetBackup processes, services, and daemons
- NetBackup logging overview
- Using the support utilities
- Using NetBackup support resources

Labs:

- Exercise A: Viewing the NetBackup services
- Exercise B: Running NetBackup reports for troubleshooting
- Exercise C: Using the nbsu and nbclogs commands
- Exercise D: (Optional) Viewing and setting debug logging properties
- Exercise E: (Optional) Enabling NetBackup legacy debug logging
- Exercise F: (Optional) Viewing debug logging levels for unified logs
