

Workflow

Build business and security processes, which are definable, repeatable, controllable, auditable, and reduce overall workload.

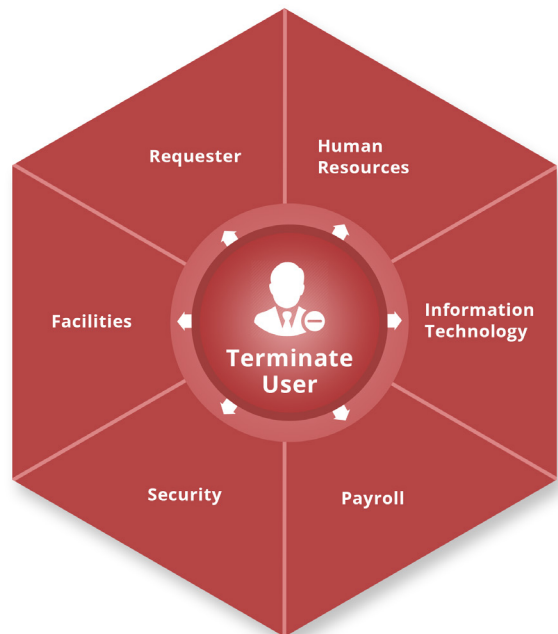

Build Out IT Automation

The Workflow framework lets you create Workflow processes that integrate Symantec tools into your organization's unique business processes. NetX Information Systems, Inc. is an accredited Symantec Workflow Partner and has in-house specialists that can design your automation.

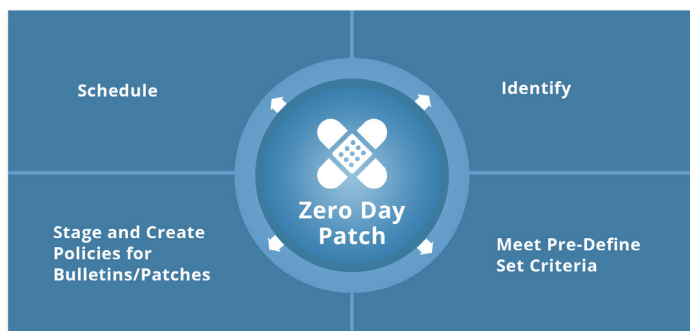

Automation – and “hyperautomation” – are obvious trends. It's hard to find a company not looking at processes it can automate according to Gartner's Top 10 Strategic Technology Trends For 2020.

Process a new hire
(permanent, full-time, part-time, temp, intern...)

Provide reliability in the authorization, processing, and communication between different departments within your organization.

Have pre-defined targets for your eventual workflow patch policies.

Workflow can be designed for any process.

Talk to a NetX specialist about how your organization's process' can be automated.
