

Remote Work and Lab Access Suite

This suite provides your workers, students or employees secure access to their work machines or secure remote access to lab computers in any location.

1 to 1

1 to Many

Remote Work:

The Remote Work feature set in SimpleHelp allows you to offer remote access to their work or home machines from a remote location. Setup is designed to be as simple as possible. Just a flick a switch on one or more remote access services to enable remote work. Users can then register just by entering their email address on their work machine.

Remote Lab Access:

The Remote Lab Access feature set in SimpleHelp allows you to offer remote access to multiple lab systems from any remote location. Users can see only available systems and connect to them as required as if they were walking into the lab in person.

To make billing just as simple, the remote work and lab access license is separate from your normal SimpleHelp server license and priced at a low rate per remote work enabled computer. Remote work users will no longer consume your SimpleHelp server sessions.

We also offer Site-Licensing.

Benefits:

- No Expensive Hardware Required
- Low Cost Single Add-on to SimpleHelp Suite
- No VPN Required
- An Alternative to VDI
- Site Licensing Available

Server Requirements

- Windows, Linux or Mac

Remote Computer Requirements

- Windows 2000 or later.
- Mac OS X 10.5 or later on Intel.
- 32bit or 64bit Linux.
