Cloud

As the IT landscape continues to evolve, cloud computing has matured to become the next emerging platform. Using Veritas Resiliency Platform and Veritas Access, NetX helps customers save money by migrating infrastructure to the cloud as well as moving workloads between cloud providers. Taking advantage of partnerships with Amazon Web Services and Microsoft Azure, NetX has the right tools to size a cloud initiative and assess cloud readiness.

Information Governance

An effective Information Governance platform ensures organizations are best positioned to counter information risk. Leveraging Veritas' Integrated platform of Enterprise Vault, Data Insight and eDiscovery powered by Clearwell, NetX helps customers make better decisions about their data. Our team can assist with retention management, classification, and supervision while simplifying search and eDiscovery. NetX also offers services for regulatory compliance, such as GDPR and DFS 23 NYCRR 500 and Designated Third Party (D3P) provider.

Storage

Storing data is one of the costliest efforts in IT. NetX helps customers relieve costs with software defined storage using Veritas Access. Additionally, NetX helps disrupt traditional storage models with Pure Storage all-flash disk arrays.

NetX provides hardware, software and education solutions that meet the ever-changing needs of our customers. Please contact us to learn more about how we can help your organization.

Data Protection

Leveraging industry leading technologies such as Veritas NetBackup and NetBackup appliances, NetX helps customers reduce backup windows, decrease recovery time, and maintain consistent data protection practices. Our engineers have experience protecting and recovering large enterprise applications and efficiently integrating backup and replication technology with disaster recovery planning. Our backup and replication solutions integrate with all enterprise platforms including physical, virtual, cloud and mixed environments.

Disaster Recovery/Business Continuity

Downtime equates to a financial loss in every industry. Every year outages have cost millions in lost revenue. NetX and its partners provide disaster recovery and business continuity services to eliminate downtime and protect business applications from natural disaster, infrastructure failures, and human error. Using Veritas Resiliency Platform and Veritas Infoscale, NetX protects workloads across all platforms on-premises or in the cloud. For customers without a DR site, NetX provides cloud solutions with Amazon Web Services and Microsoft Azure.

Training

For a full list of classes, enrollment or more information regarding NetX Instructor-led Training classes please visit us at: www.netxinc.com/training.
