SECURITY

"Bringing best of breed solutions with industry tested talent to train your users, protect your network, and secure your data."

Real-time intelligence is the key to protecting your infrastructure.

Intelligent security enables you to identify threats as they occur. Without complete visibility into your environment and the current threat landscape, it's easy for organizations to be caught off guard by an attacker intent on exploiting vulnerabilities and exposing data breaches and ransomware attacks.

NetX Information Sytems will help you create a cyber-resilient security strategy fueled by intelligence to safeguard your organization from targeted attacks and the persistent threats of advanced viruses, malware, rootkits, and bootkits.

VERITAS

NetX helps customers reduce backup windows, decrease recovery time and maintain consistent data protection practices. Our backup and replication solutions integrate with all enterprise platforms including physical, virtual, cloud and mixed environments.

WIZ

Use Wiz's Cloud Security Platform to build faster on cloud, enabling security, dev and devops to work together in a self-service model built for the scale and speed of your cloud development. Agentless cloud security and compliance for AWS, Azure, Google Cloud, and Kubernetes.

CHECK POINT

Checkpoint named a leader in network security, secures the network, the cloud, and endpoints with lightning speed and integrated solutions.

Harmony • Quantum • CloudGuard • Horizon

KnowBe4

World-class, user-friendly new-school Security Awareness Training. KnowBe4 gives you self-service enrollment, and both pre-and post-training phishing security tests that show you the percentage of end-users that are Phish-prone.

simplehelp

SimpleHelp® controls remote users on-demand, monitors remote systems and receives alerts when they need maintenance. SimpleHelp's® Remote Work and Remote Lab Access features allow students and workers to securely access their work machines or school lab computers from any remote location.

CAMEYO

Cameyo is a cloud-native Virtual App Delivery (VAD) platform that enables the secure delivery of all of your business-critical applications to any device from the browser without the need for virtual desktops or VPNs.

PingIdentity®

- **PingOne for Workforce -** allows you to enable centralized, seamless and secure employee experiences.
- **PingFederate -** serves as a global authentication authority to provide Federated SSO for workforce, partner, and customer identities to web apps, mobile apps and APIs no matter where they are hosted.
- **PingOne DaVinci -** An identity orchestration platform that enables organizations to design user-centric experiences via a no-code, drag-and-drop interface.

FORTINET.

Fortinet offers automated security operations in a consolidated cybersecurity platform. Reducing cyber risk and attack impact by speeding both detection and response.
