### OFFERINGS

#### Data Protection and Ransomware Resilience

- NetX assists customers in keeping the Data Protection environment running at optimal conditions to help prevent and recover from Ransomware attacks. We have a proven track record of assisting customers in recovering their data or systems without directly paying the hackers.
- Services we provide free to our existing customers:
  - Survey of all assets for Data Protection
  - Cyber Resiliency Assessment for Data Protection
  - Health Check and Risk Assessment
  - Backup Licensing and Capacity forecast estimates

#### Data Governance and Compliance

- NetX empowers customers to make smarter data-driven decisions by equipping organizations with the tools and insights needed to effectively mitigate information risk and enhance data security.
- We offer support with retention management, data classification, and supervision, while streamlining search and eDiscovery processes for greater efficiency and compliance.
- NetX also provides comprehensive services for regulatory compliance, including adherence to GDPR, DFS 23 NYCRR 500, and Designated Third Party (D3P) provider requirements.

#### Identity

- Effective identity and access management is crucial for security. NetX provides customers with identity and governance solutions designed to guarantee that the correct individuals have the precise levels of access to systems and data.
- Access management includes identity verification, access control, and privileged access management (PAM) solutions.

#### Cloud Posture Management

- Cloud Posture Management involves ensuring that an organization's cloud resources and configurations adhere to security best practices and compliance standards. NetX aids customers in upholding a strong security stance within cloud environments, including AWS, Azure, and Google Cloud.
- This includes identifying and remediating misconfigurations, managing access controls, monitoring cloud resources for security threats, and ensuring data encryption in the cloud.

#### Zero Trust Network Access (ZTNA)

- The Zero Trust model operates on the principle that no one, whether inside or outside the network, is inherently trusted. Every access request is verified to enhance security and minimize risks.
- NetX helps customers implement ZTNA by verifying identities and devices before granting access to network resources.
- ZTNA solutions often include technologies like software-defined perimeters and conditional access controls.

"Bringing best of breed solutions to train your users, protect your network, and secure your data."

### OFFERINGS

#### Email Security

- Email is a frequent target for cyberattacks. NetX helps customers deploy advanced email security solutions such as filtering, anti-spam, anti-phishing, and encryption.
- These solutions protect against email-based threats and safeguard the confidentiality of sensitive communications.

#### Endpoint Management and Security

- NetX assists customers in managing and securing their endpoints, which include computers, mobile devices, and servers. It may involve deploying and managing endpoint security solutions, such as antivirus, anti-malware, and endpoint detection and response tools.
- Endpoint management can also involve tasks like patch management, ensuring all devices are up to date with the latest security patches, and implementing policies to enforce security best practices on endpoints.
- NetX offers a Secure Remote Control, Monitoring and Alerting solution. The built-in Remote Work component provides a cost-effective VPN replacement.

#### Storage

- Data storage is one of the most expensive aspects of IT operations. NetX reduces these costs for customers through software-defined storage solutions.
- NetX transforms traditional storage models by leveraging Pure Storage all-flash disk arrays, delivering faster, more efficient, and modern data storage solutions.

#### Visitor Management with Face Matching

- NetX provides a modern, secure, user-friendly solution for managing visitors and ensuring seamless access control.
- Our visitor management with face-matching system streamlines visitor check-ins and enhances security through advanced facial recognition technology.
- Combine visitor registration and real-time tracking for a secure and reliable solution for monitoring visitor activity.

#### Training

For a full list of classes, enrollment or more information regarding NetX Instructor-led Training classes please visit us at: [netxinc.com/training](http://netxinc.com/training)

As your trusted partner, NetX goes beyond reducing costs and mitigating risks. We enhance your organization's confidence by strengthening your approach to system security, IT infrastructure, data protection, data management, identity management, and cloud solutions.

Contact NetX today to customize, enhance, and secure your organization's systems with cutting-edge solutions from our team of industry-proven experts. Let us safeguard your operations with the most advanced and current technologies available.
